# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

protocol::context::Context . . . . .	7
protocol::state::State . . . . .	12
protocol::state::LinkDown . . . . .	8
protocol::state::SendingKeepAlive . . . . .	9
protocol::state::SendingStart . . . . .	10
protocol::state::StartReceivedSendConfiguration . . . . .	11

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">protocol::context::Context</a>	7
<a href="#">protocol::state::LinkDown</a>	8
<a href="#">protocol::state::SendingKeepAlive</a>	9
<a href="#">protocol::state::SendingStart</a>	10
<a href="#">protocol::state::StartReceivedSendConfiguration</a>	11
<a href="#">protocol::state::State</a>	12

## Chapter 3

# File Index

### 3.1 File List

Here is a list of all documented files with brief descriptions:

include/ <a href="#">context.hpp</a>	
Context class headers	15
include/ <a href="#">event.hpp</a>	
Event class headers	17
include/ <a href="#">state.hpp</a>	
State class methods	18
src/ <a href="#">context.cpp</a>	
Context class methods	19
src/ <a href="#">main.cpp</a>	
Service main file	20
src/ <a href="#">state.cpp</a>	
State class methods	22

## Chapter 4

# Class Documentation

### 4.1 protocol::context::Context Class Reference

#### Public Member Functions

- [Context](#) (std::unique\_ptr< [protocol::state::State](#) > state)  
*Construct a new [protocol::context::Context::Context](#) object.*
- [~Context](#) ()  
*Destroy the [protocol::context::Context::Context](#) object.*
- void [TransitionTo](#) (std::unique\_ptr< [protocol::state::State](#) > state)
- void [Event](#) (protocol::event::Event event)

#### 4.1.1 Constructor & Destructor Documentation

##### 4.1.1.1 Context()

```
protocol::context::Context::Context (  
    std::unique_ptr< protocol::state::State > state )
```

Construct a new [protocol::context::Context::Context](#) object.

#### Parameters

<i>state</i>	
--------------	--

#### 4.1.2 Member Function Documentation

#### 4.1.2.1 TransitionTo()

```
void protocol::context::Context::TransitionTo (
    std::unique_ptr< protocol::state::State > state )
```

##### Parameters

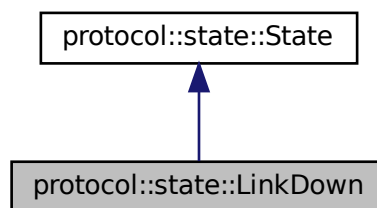

<i>state</i>	
--------------	--

The documentation for this class was generated from the following files:

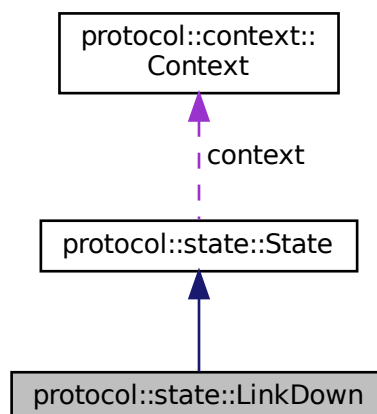

- [include/context.hpp](#)
- [src/context.cpp](#)

## 4.2 protocol::state::LinkDown Class Reference

Inheritance diagram for protocol::state::LinkDown:

Collaboration diagram for protocol::state::LinkDown:

## Public Member Functions

- void **Handle** (protocol::event::Event event) override

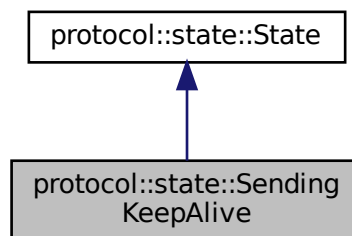

## Additional Inherited Members

The documentation for this class was generated from the following files:

- include/[state.hpp](#)
- src/[state.cpp](#)

## 4.3 protocol::state::SendingKeepAlive Class Reference

Inheritance diagram for protocol::state::SendingKeepAlive:

Collaboration diagram for protocol::state::SendingKeepAlive:

## Public Member Functions

- void **Handle** (protocol::event::Event event) override

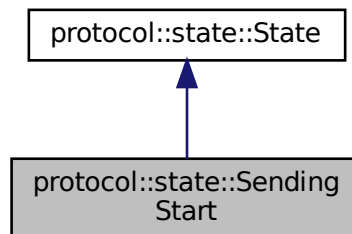

## Additional Inherited Members

The documentation for this class was generated from the following files:

- include/[state.hpp](#)
- src/[state.cpp](#)

## 4.4 protocol::state::SendingStart Class Reference

Inheritance diagram for protocol::state::SendingStart:

Collaboration diagram for protocol::state::SendingStart:

## Public Member Functions

- void **Handle** (protocol::event::Event event) override

## Additional Inherited Members

The documentation for this class was generated from the following files:

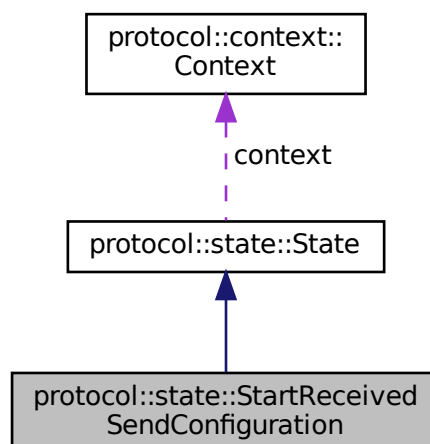

- include/[state.hpp](#)
- src/[state.cpp](#)

## 4.5 protocol::state::StartReceivedSendConfiguration Class Reference

Inheritance diagram for protocol::state::StartReceivedSendConfiguration:

Collaboration diagram for protocol::state::StartReceivedSendConfiguration:

## Public Member Functions

- void **Handle** (protocol::event::Event event) override

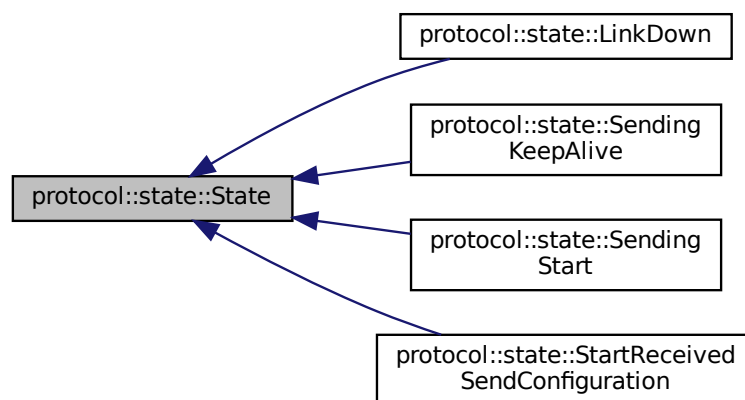

## Additional Inherited Members

The documentation for this class was generated from the following files:

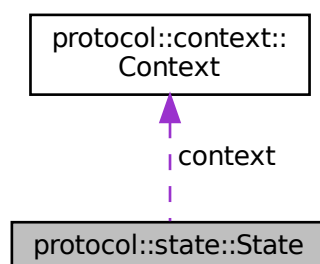

- include/state.hpp
- src/state.cpp

## 4.6 protocol::state::State Class Reference

Inheritance diagram for protocol::state::State:

Collaboration diagram for protocol::state::State:

## Public Member Functions

- virtual [~State](#) ()  
*Destroy the protocol::state::State::State object.*
- void [SetContext](#) ([context::Context](#) \*context)
- virtual void **Handle** (protocol::event::Event event)=0

## Protected Attributes

- [context::Context](#) \* context

### 4.6.1 Member Function Documentation

#### 4.6.1.1 SetContext()

```
void protocol::state::State::SetContext (  
    context::Context * context )
```

##### Parameters

<a href="#">context</a>	
-------------------------	--

The documentation for this class was generated from the following files:

- include/[state.hpp](#)
- src/[state.cpp](#)

## Chapter 5

# File Documentation

### 5.1 include/context.hpp File Reference

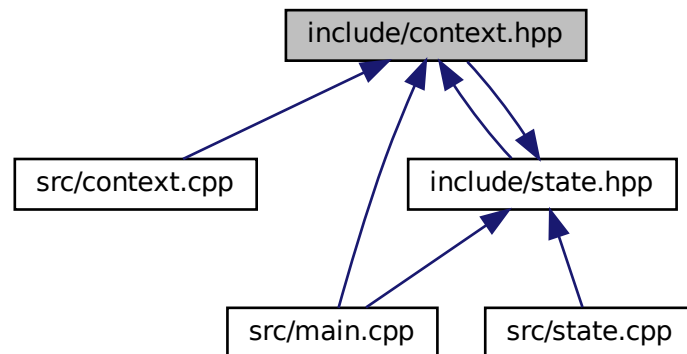

Context class headers.

```
#include <memory>
#include "state.hpp"
#include "event.hpp"
```

Include dependency graph for context.hpp:

This graph shows which files directly or indirectly include this file:

## Classes

- class [protocol::context::Context](#)

### 5.1.1 Detailed Description

Context class headers.

#### Author

Mateus Lima Alves ( [mateuslima.ti@gmail.com](mailto:mateuslima.ti@gmail.com) )

#### Version

0.1

#### Date

2022-09-28

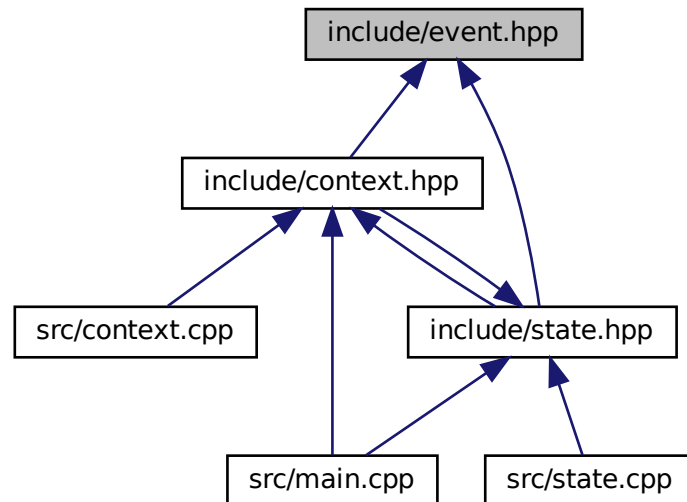

#### Copyright

Copyright (c) 2022

## 5.2 include/event.hpp File Reference

Event class headers.

This graph shows which files directly or indirectly include this file:

### Enumerations

- enum class **Event** : char {  
    **InterfaceNok** , **InterfaceOk** , **OkReceivedPacket** , **NokReceivedPacket** ,  
    **NotReceivedAnswer** }

### 5.2.1 Detailed Description

Event class headers.

#### Author

Mateus Lima Alves ( [mateuslima.ti@gmail.com](mailto:mateuslima.ti@gmail.com) )

#### Version

0.1

#### Date

2022-09-28

#### Copyright

Copyright (c) 2022

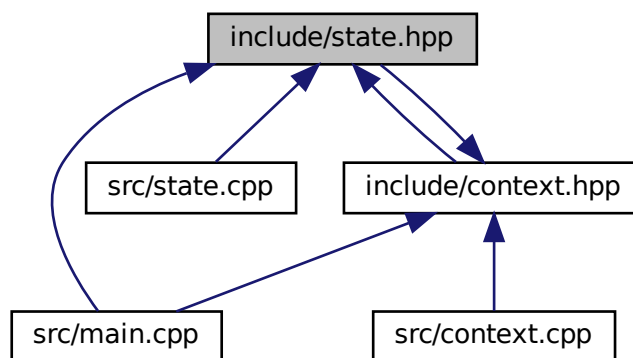

### 5.3 include/state.hpp File Reference

State class methods.

```
#include "context.hpp"
#include "event.hpp"
Include dependency graph for state.hpp:
```

This graph shows which files directly or indirectly include this file:

### Classes

- class `protocol::state::State`
- class `protocol::state::LinkDown`
- class `protocol::state::SendingStart`
- class `protocol::state::StartReceivedSendConfiguration`
- class `protocol::state::SendingKeepAlive`

### 5.3.1 Detailed Description

State class methods.

Author

Mateus Lima Alves ( [mateuslima.ti@gmail.com](mailto:mateuslima.ti@gmail.com) )

Version

0.1

Date

2022-09-28

Copyright

## 5.4 src/context.cpp File Reference

Context class methods.

```
#include <iostream>
#include "context.hpp"
Include dependency graph for context.cpp:
```

### 5.4.1 Detailed Description

Context class methods.

#### Author

Mateus Lima Alves ( [mateuslima.ti@gmail.com](mailto:mateuslima.ti@gmail.com) )

#### Version

0.1

#### Date

2022-09-28

#### Copyright

Copyright (c) 2022

## 5.5 src/main.cpp File Reference

Service main file.

```
#include <iostream>
#include <memory.h>
#include "context.hpp"
#include "state.hpp"
```

Include dependency graph for main.cpp:

## Functions

- `int main (int argc, char const *argv[ ])`  
*service main function.*

### 5.5.1 Detailed Description

Service main file.

#### Author

Mateus Lima Alves ( [mateuslima.ti@gmail.com](mailto:mateuslima.ti@gmail.com) )

#### Version

0.1

#### Date

2022-09-28

#### Copyright

Copyright (c) 2022

### 5.5.2 Function Documentation

#### 5.5.2.1 main()

```
int main (  
    int argc,  
    char const * argv[ ] )
```

service main function.

#### Parameters

in	<i>argc</i>	argument count
in	<i>argv</i>	argument vector

#### Returns

int

Start the context setting the machine to state LinkDown.

Set the associated event to InterfaceOk. After that the machine state change to SendingStart.

Set the associated event to OkReceivedPacket. After that the machine state change to StartReceivedSendConfiguration.

Set the associated event to OkReceivedPacket. After that the machine state change to SendingKeepAlive.

## 5.6 src/state.cpp File Reference

State class methods.

```
#include "state.hpp"
```

Include dependency graph for state.cpp:

### 5.6.1 Detailed Description

State class methods.
